

## SOFTWARE RELEASE DOCUMENT (SOFTDOC)

Product:	HPE Shadowbase Enterprise Manager
Release:	Gravic Version: 6.500 HPE NonStop Shadowbase: T1122H06-AAM (SB Repl/Guardian)
Release Date:	September 1, 2018
Copyright Notice:	Copyright Gravic, Inc. 1995 – 2018 ( <a href="http://www.gravic.com">www.gravic.com</a> )
File Name:	IPM6500-SEM.pdf

NOTE: This release contains updated software for HPE Shadowbase Enterprise Manager, a Microsoft Windows based application for monitoring and managing Shadowbase replication environments.

NOTE: This softdoc applies to the HPE Shadowbase Enterprise Manager component of T1122H06. Other softdocs document the releases of the other components in T1122H06, including:

- HPE Shadowbase Audit Reader,
- HPE Shadowbase Compare for SQL,
- HPE NonStop Shadowbase Guardian replication, and
- HPE NonStop Shadowbase OSS replication.
- HPE Shadowbase for Other Servers.

You are advised to reference those other softdocs for the changes related to those specific components.

## ***Disclaimer***

We are distributing this communication in an effort to bring important information to the attention of users of the affected products. We recommend that all users determine the applicability of this information to their individual situations and take appropriate action. We do not represent or warrant that this information is necessarily accurate or complete for all user situations and, consequently, we will not be responsible for any damages resulting from the user's use or disregard of the information provided. To the extent permitted by law, we disclaim all representations and warranties, whether express, implied, statutory, or otherwise, including the warranties of the merchantability, fitness for a particular purpose, title, and non-infringement.

We expect customers of the Shadowbase product suite to “stay current” on Shadowbase releases. This means that you, the customer, should periodically upgrade your Shadowbase software to a newer release that is under support before support ends on your current release. For most customers, this means that you will want to upgrade while your release is in ‘ACTIVE’ support. Otherwise, you run the risk of not being able to get full (or even any if the release has gone ‘OBSOLETE’ end-of-service-life) support for the version you are running.

The Shadowbase Software Policy for Software Versions is described here: <https://shadowbasesoftware.com/support/shadowbase-software-product-release-and-support-policies/>. We encourage all customers to periodically review this material and plan for periodic upgrades to their Shadowbase software. Contact Support if you need additional information.

## ***Special Notes for Version 6.500***

- 1) The SEM help subsystem requires a web browser that supports HTML 5. If you have issues displaying help, please upgrade to the latest version of your browser. Help is supported by Mozilla Firefox version 4 or later, Google Chrome version 9 or later, and Internet Explorer 9 or later.

## ***Changes in Release 6.500***

This section summarize the new features and problems fixed since the last General Availability release, Gravic version 6.320.

## ***New Features in Release 6.500***

- 1) Added support for the new REPLICATION parameter status messages. SEM monitor objects will be able to display and differentiate between REPLSUSP, SUSPNEXT, and REPLSKIP

## ***Problems Fixed in Release 6.500***

- 1) SEM will remember the username and password for the e-mail feature properly now. The password is hashed.
- 2) Configuring 21 or more objects in a session would cause the Monitor Preferences window to crash.
- 3) SEM would prompt to save the configuration even with no changes being done.

## ***Installation Instructions***

SEM is provided with a standard Windows installer. Unzip the downloaded file, change directory to the SEM installation directory, and run setup.exe. The installer will take you through the remaining installation tasks.

## ***Known Problems Remaining***

- 1) The listener for Shadowbase Other Server environments will not properly connect if it is named using a one-character object name.
- 2) SEM monitor polling interval setting sometimes gets stuck below 10 seconds
- 3) Monitor preferences auto-restart settings sometimes do not apply, and servers do not restart as expected.
