

HPE and Gravic

HPE NonStop systems and HPE Shadowbase
Working together. Accelerating results.

A new style of partnering

Hewlett Packard Enterprise and Gravic are collaborating in a fresh new way to bring increased value to customers like you.

We know that acquiring technology is only the first step in achieving a business goal. The technology pieces need to work together. They need to be tested. They need to provide rich functionality, quickly and effectively, so you can concentrate on your business needs.

To help satisfy these needs, Gravic is a member of the HPE Partner Ready for Technology Partner program, an industry-leading approach to supply sophisticated integrated technologies in a simple, confident, and efficient manner.

Gravic has access to the right tools, processes, and resources to help our joint customers accelerate innovation and transformation that brings value, achieves business needs, and increases revenue and market share.

Product overviews

HPE Shadowbase: Shadowbase Business Continuity software enables rapid recovery from planned and unplanned outages in times ranging from minutes (high availability, disaster recovery) to immediate (continual availability, disaster tolerance), with minimal or zero data loss. The software supports active/passive, sizzling-hot-takeover (SZT), and fully active/active business continuity architectures. Shadowbase Data Integration and Application Integration software enables real-time data replication and distribution between heterogeneous platforms, databases, and applications. Changes made in any database are replicated in real-time to target systems, releasing the value of data for new business processes. Critical data generated by one application is distributed to other applications to be analyzed and acted upon immediately. Shadowbase Data Management Utilities software provides tools to monitor and, if necessary, correct data in order to maintain database consistency and for audit compliance purposes. and Repair are tools to validate that a target database matches a source database, and list and correct, if necessary, any differences found.

HPE NonStop: For business that never stops, HPE Integrity NonStop was designed from day one with built-in clustering and workload balancing to enable withstanding single points of failure, so applications continue as if no failure occurred. That means no disruption of work, no impact on customers, and no degradation in performance. For almost four decades, the HPE Integrity NonStop architecture remains the ideal choice when there is a need for reliable uninterrupted availability—in compute environments that serve mission-critical businesses.

HPE NonStop scales up to 16 HPE NonStop CPUs and 6 cores per CPU within a single node, each running its own copy of the HPE NonStop OS, and scales out to 4080 HPE NonStop CPUs on 255 networked nodes or 24,480 cores.

HPE NonStop comes with a built-in transactions management framework that helps ensure full data integrity. Support for modern languages, interfaces, and Eclipse-based environments makes applications development faster, easier, and more efficient. HPE NonStop also comes with modern security algorithms and encryption technologies.

Company overview

About Gravic

Gravic, Inc. is a privately held company located in Malvern, Pennsylvania, USA. Gravic makes a range of computer software products for change data capture, data collection, transformation, and distribution uses. The Shadowbase line of software includes solutions for business continuity, data integration for real-time data synchronization, application integration for real-time business intelligence, and a number of utilities and tools, creating a complete solution for our customers.

Gravic, Inc. led the market in providing data replication and data integration software solutions ever since the release of TMF-Auditor, the first online replication product of its kind, in 1984. Today, Gravic continues to push the technological evolution of database replication solutions with its patented flagship Shadowbase line of transactional replication software products. Gravic strives to provide complete replication solutions to our customers by providing expert professional services when required.

Customers of Shadowbase Data Replication and Data Integration products include banks, financial and brokerage firms, insurance companies, stock exchanges, electric utilities, healthcare businesses, telecommunication companies, and government agencies. HPE directly sells and supports Shadowbase Business Continuity, Data Integration, and Application Integration solutions under the name HPE Shadowbase. For more information, contact your local HPE Shadowbase representative or visit shadowbasesoftware.com.

About Hewlett Packard Enterprise

Hewlett Packard Enterprise is a global technology leader focused on developing intelligent solutions that allow customers to capture, analyze, and act upon data seamlessly from edge to core to cloud. HPE enables customers to accelerate business outcomes by driving new business models, creating new customer and employee experiences, and increasing operational efficiency today and into the future.
