Sometimes things just don’t add up.

Use HPE Shadowbase Compare and HPE Shadowbase Repair to make sense of your data.

HPE Shadowbase data validation and correction works in any season, for any reason.

You use data replication for business continuity to keep your backup database copies up-to-date. Good for you! If there’s an IT outage, you’re covered, right? But, things happen. Will you know for sure that your backup database copies are consistent and correct? And, if the auditors come calling, can you prove that you are meeting their requirements?

With Shadowbase Compare, you can perform real-time data validation to prove that database copies are consistent with their data source. And if they’re not, use Shadowbase Repair to make your copies consistent. You can then confidently answer, “Yes!” to both of these questions!

Be prepared for any situation in any season with HPE Shadowbase Compare and HPE Shadowbase Repair!

For more information, please see the HPE Shadowbase solution briefs on Compare and Repair.

Hewlett Packard Enterprise directly sells and supports Shadowbase solutions. Please contact your HPE account team or Gravic for more information.
