PRESS RELEASE: For Release on January 11, 2022

Gravic, Inc.® Announces Shadowbase Version 6.700 for Other Server Platforms is Generally Available

Malvern, PA — January 11, 2022

Gravic, Inc. is pleased to announce the General Availability of Shadowbase software version 6.700 for Other Server platforms.

Shadowbase is a comprehensive suite of software products that addresses all aspects of data replication and data and application integration for business continuity and other purposes:

- Sophisticated Business Continuity capabilities to ensure IT service availability
- Extensive Data Integration and Application Integration facilities for data distribution enabling real-time business intelligence
- Designed for HPE NonStop servers and heterogeneous platforms (IBM, Linux, Unix, Windows, etc.)
- Supports industry standard databases, including: HPE NonStop SQL/MX, SQL/MP, Enscribe, IBM Db2®, Oracle Enterprise, Oracle MySQL, SAP Sybase, and Microsoft SQL Server
- Enables Zero Downtime Migrations (ZDM) when migrating to a new platform, software release, or firmware upgrade
- Compare tool to validate database consistency
- Data Management tools for audit compliance and data integrity
- Administrative utilities to simplify installation, configuration, deployment, and day-to-day activities
- Available directly from HPE and supported by standard HPE GNSC support services

WARNING: A new license file is required to install and run HPE Shadowbase for Other Servers software version 6.700. This is due to a change in the format of the license file, current license terms are still valid and remain in force. Contact the HPE License Manager **to request a new license file. DO NOT INSTALL HPE Shadowbase for Other Servers software version 6.700 until a new license file has been obtained.**

Shadowbase software version 6.700 for Other Server platforms includes several key changes and fixes, along with a roll-up of the prior version 6.600 patches. Please reference the SOFTDOC, located at HPE Shadowbase Product Releases, for more information.

1. **Support for the replication of SQL/MP and SQL/MX Sequence Objects** from NSB in Guardian to OSB in OSS.
2. **Support for PostgreSQL target replication** has been added for ODBC target objects.
3. **The Visual Studio project for User Exit development** has been added back into the Windows release of HPE Shadowbase.
4. **Support for more versions of the MySQL ODBC driver** on Windows and Linux.
5. **Oracle database replication enhancements**
   a. Support for collection of the Oracle types TIMESTAMP WITH TIMEZONE and TIMESTAMP WITH LOCAL TIMEZONE has been added to HPE Shadowbase Log Source for Oracle.
   b. Support for the use of User Exits that can modify data with HPE Shadowbase Log Source for Oracle.

c. Support for replicating Oracle column names that include spaces has been added with the use of the SHAD_OPCOLLECT_COLUMN_WRAP parameter to set the delimiters required by the target.
6. **Other miscellaneous usability enhancements** and fixes.

Obtaining HPE Shadowbase for Other Servers 6.700

Shadowbase is built by Gravic, and globally sold and supported by HPE. HPE Shadowbase for Other Servers 6.700 is an Independent Product (IP) and hence is shipped, upon ordering, on its own DVD. The applicable HPE Product ID (PID) / Stock Keeping Unit (SKU) is given below:

HPE Product Names	PID/SKU
HPE Shadowbase Business Continuity (BC) Basic	WSA49V6T1/T2
HPE Shadowbase Business Continuity (BC) Advanced	WSA50V6T1/T2
HPE Shadowbase Data Integration Application Integration (DIAI) Basic	WSA51V6T1/T2
HPE Shadowbase Data Integration Application Integration (DIAI) Advanced	WSA52V6T1/T2
HPE Shadowbase Audit Log	WSA53V6T1/T2
NOTE: SKU suffix T1 <= 8 logical processors / T2 > 8 logical processors	

Customers already holding licenses for the above PIDs/SKUs having a valid support contract with HPE can download Shadowbase version 6.700 for HPE NonStop Server platforms via SCOUT at the NonStop eServices Portal.
